# Delta Report

October 16, 2026

**Delta Report Summary**

This document compares the results of two security scans. All dates are displayed using the timezone "Coordinated Universal Time", which is abbreviated "UTC". The task was "Lab03 Authenticated Scan". The first scan started at Fri Oct 16 13:09:49 2026 UTC and ended at 2026-10-16T13:32:34Z. The second scan started at Fri Oct 16 12:22:03 2026 UTC and ended at Fri Oct 16 12:44:35 2026 UTC. The report first summarises the hosts found. Then, for each host, the report describes the changes that occurred between the two scans.

## Contents

**1 Result Overview** **2**

1.1 Host Authentications . . . . . 2

**2 Results per Host** **2**

2.1 10.0.5.4 . . . . . 2

2.1.1 Medium general/tcp . . . . . 2

2.1.2 Low general/tcp . . . . . 6

# 1 Result Overview

| Host | Critical | High | Medium | Low | Log | False P. |
|---|---|---|---|---|---|---|
| 10.0.5.4 | 0 | 0 | 2 | 1 | 0 | 0 |
| Total: 1 | 0 | 0 | 2 | 1 | 0 | 0 |

Vendor security updates are not trusted.
Overrides are off. Even when a result has an override, this report uses the actual threat of the result.
Information on overrides is excluded from the report.
Notes are included in the report.
This report might not show details of all issues that were found.
Issues with the threat level "Log" are not shown.
Issues with the threat level "Debug" are not shown.
Issues with the threat level "False Positive" are not shown.
Only results with a minimum QoD of 70 are shown.

This report contains all 3 results selected by the filtering described above.

## 1.1 Host Authentications

| Host | Protocol | Result | Port/User |
|---|---|---|---|
| 10.0.5.4 | SSH | Success | Protocol SSH, Port 22, User gvmscan |

# 2 Results per Host

## 2.1 10.0.5.4

Host scan start Fri Oct 16 13:10:41 2026 UTC
Host scan end Fri Oct 16 13:32:27 2026 UTC

| Service (Port) | Threat Level |
|---|---|
| general/tcp | Medium |
| general/tcp | Low |

### 2.1.1 Medium general/tcp

Medium (CVSS: 5.5)

NVT: Missing Linux Kernel mitigations for 'SSB - Speculative Store Bypass' hardware vulnerabilities

**Product detection result**
`cpe:/a:linux:kernel`
`Detected by Detection of Linux Kernel mitigation status for hardware vulnerabili`
`↪ties (OID: 1.3.6.1.4.1.25623.1.0.108765)`

**Summary**
The remote host is missing one or more known mitigation(s) on Linux Kernel side for the referenced 'SSB - Speculative Store Bypass' hardware vulnerabilities.

**Quality of Detection (QoD):** 80%

... continues on next page ...

... continued from previous page ...

**Vulnerability Detection Result**

```
The Linux Kernel on the remote host is missing the mitigation for the "spec_stor
↪e_bypass" hardware vulnerabilities as reported by the sysfs interface:
sysfs file checked                                    | Linux Kernel status
↪(SSH response)
------------------------------------------------------------------------------
↪--------------
/sys/devices/system/cpu/vulnerabilities/spec_store_bypass | Vulnerable
Notes on the "Linux Kernel status (SSH response)" column:
- sysfs file missing: The sysfs interface is available but the sysfs file for th
↪is specific vulnerability is missing. This means the current Linux Kernel does
↪n't know this vulnerability yet. Based on this it is assumed that it doesn't p
↪rovide any mitigation and that the target system is vulnerable.
- Strings including "Mitigation:", "Not affected" or "Vulnerable" are reported d
↪irectly by the Linux Kernel.
- All other strings are responses to various SSH commands.
```

**Solution:**
**Solution type:** VendorFix
The following solutions exist:
- Update to a more recent Linux Kernel to receive mitigations on Kernel level and info about the mitigation status from it
- Enable the mitigation(s) in the Linux Kernel (might be disabled depending on the configuration)
Additional possible mitigations (if provided by the vendor) are to:
- install a Microcode update
- update the BIOS of the Mainboard
Note: Please create an override for this result if one of the following applies:
- the sysfs file is not available but other mitigations like a Microcode update is already in place
- the sysfs file is not available but the CPU of the host is not affected
- the reporting of the Linux Kernel is not correct (this is out of the control of this VT)

**Vulnerability Detection Method**
Checks previous gathered information on the mitigation status reported by the Linux Kernel.
Details: `Missing Linux Kernel mitigations for 'SSB - Speculative Store Bypass' hardware .

## Medium (CVSS: 5.5)

### NVT: Missing Linux Kernel mitigations for 'Processor MMIO Stale Data' hardware vulnerabilities (INTEL-SA-00615)

**Product detection result**

cpe:/a:linux:kernel
Detected by Detection of Linux Kernel mitigation status for hardware vulnerabili
↪ties (OID: 1.3.6.1.4.1.25623.1.0.108765)

**Summary**

The remote host is missing one or more known mitigation(s) on Linux Kernel side for the referenced 'Processor MMIO Stale Data' hardware vulnerabilities.

... continues on next page ...

... continued from previous page ...

**Quality of Detection (QoD):** 80%

**Vulnerability Detection Result**

```
The Linux Kernel on the remote host is missing the mitigation for the "mmio_stal
↪e_data" hardware vulnerabilities as reported by the sysfs interface:
sysfs file checked                                    | Linux Kernel status (S
↪SH response)
-------------------------------------------------------------------------------
↪-----------------------------------------------------
/sys/devices/system/cpu/vulnerabilities/mmio_stale_data | Vulnerable: Clear CPU
↪buffers attempted, no microcode; SMT Host state unknown
Notes on the "Linux Kernel status (SSH response)" column:
- sysfs file missing: The sysfs interface is available but the sysfs file for th
↪is specific vulnerability is missing. This means the current Linux Kernel does
↪n't know this vulnerability yet. Based on this it is assumed that it doesn't p
↪rovide any mitigation and that the target system is vulnerable.
- Strings including "Mitigation:", "Not affected" or "Vulnerable" are reported d
↪irectly by the Linux Kernel.
- All other strings are responses to various SSH commands.
```

**Solution:**
**Solution type:** VendorFix
The following solutions exist:
- Update to a more recent Linux Kernel to receive mitigations on Kernel level and info about the mitigation status from it
- Enable the mitigation(s) in the Linux Kernel (might be disabled depending on the configuration)
Additional possible mitigations (if provided by the vendor) are to:
- install a Microcode update
- update the BIOS of the Mainboard
Note: Please create an override for this result if one of the following applies:
- the sysfs file is not available but other mitigations like a Microcode update is already in place
- the sysfs file is not available but the CPU of the host is not affected
- the reporting of the Linux Kernel is not correct (this is out of the control of this VT)

**Affected Software/OS**
Various Intel CPUs. Please see the references for the full list of affected CPUs.

**Vulnerability Detection Method**
Checks previous gathered information on the mitigation status reported by the Linux Kernel.
Details: `Missing Linux Kernel mitigations for 'Processor MMIO Stale Data' hardware vulne.

### 2.1.2 Low general/tcp

Low (CVSS: 2.6)

NVT: TCP Timestamps Information Disclosure

**Summary**
The remote host implements TCP timestamps and therefore allows to compute the uptime.

**Quality of Detection (QoD):** 80%

**Vulnerability Detection Result**

```
It was detected that the host implements RFC1323/RFC7323.
The following timestamps were retrieved with a delay of 1 seconds in-between:
Packet 1: 1944587462
Packet 2: 1944588508
```

**Impact**
A side effect of this feature is that the uptime of the remote host can sometimes be computed.

**Solution:**
**Solution type:** Mitigation
To disable TCP timestamps on linux add the line 'net.ipv4.tcp_timestamps = 0' to /etc/sysctl.conf. Execute 'sysctl -p' to apply the settings at runtime.
To disable TCP timestamps on Windows execute 'netsh int tcp set global timestamps=disabled'
Starting with Windows Server 2008 and Vista, the timestamp can not be completely disabled.
The default behavior of the TCP/IP stack on this Systems is to not use the Timestamp options when initiating TCP connections, but use them if the TCP peer that is initiating communication includes them in their synchronize (SYN) segment.
See the references for more information.

... continues on next page ...

. . . continued from previous page . . .

**Affected Software/OS**
TCP implementations that implement RFC1323/RFC7323.

**Vulnerability Insight**
The remote host implements TCP timestamps, as defined by RFC1323/RFC7323.

**Vulnerability Detection Method**
Special IP packets are forged and sent with a little delay in between to the target IP. The responses are searched for a timestamps. If found, the timestamps are reported.
Details: `TCP Timestamps Information Disclosure`
OID:1.3.6.1.4.1.25623.1.0.80091
Version used: `2023-12-15T16:10:08Z`
